# SF-2018 ASSIGNMENT 3

## Create the following template using CSS:

Upon selecting a box it should show the alphabet
(Initially all alphabets will be hidden).

	E		

Then have alphabets placed in the boxes like this:

D			

Initial arrangement of the boxes will be random (The boxes can be just placed in a random fashion or can be automated so you get different arrangement every time you open the page) .

User can select two boxes at maximum. If two boxes of different alphabets are selected then nothing happens (They both get hidden again) like this:

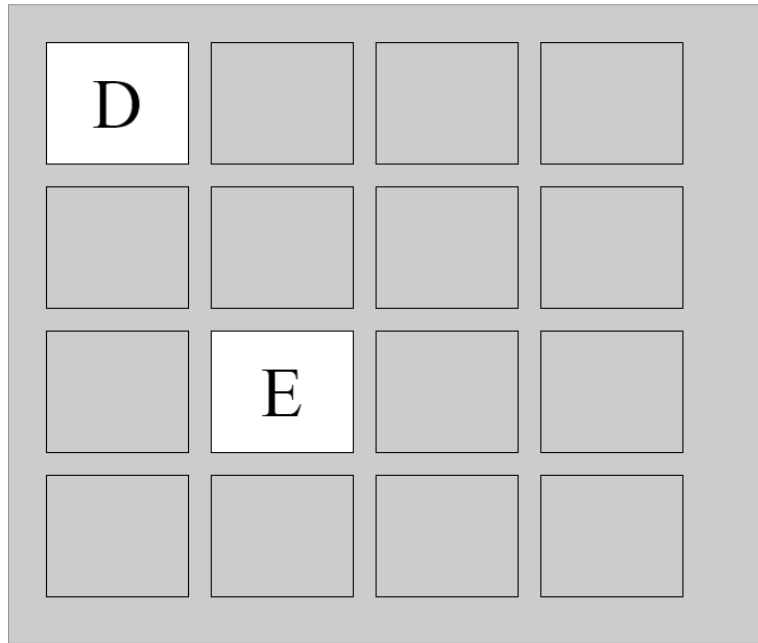

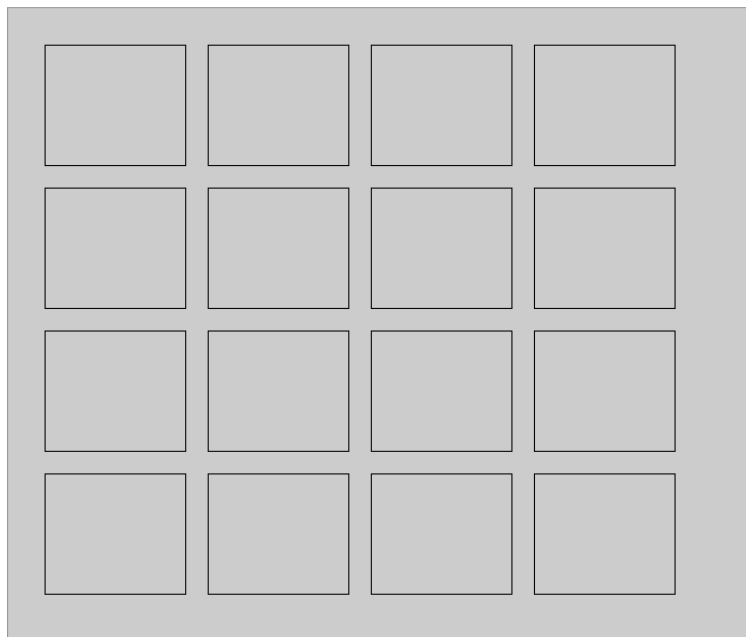

Fig: On selecting two different boxes

Fig: As they are different alphabets thus alphabets got hidden

If both the boxes have same alphabet than show the result like this (You can add alert or any other notification to show success):

Creativity is highly appreciated.

You can add any enhancement to make it look cooler. For example, adding smooth transition, some sort of animations, scoreboard, timer, etc.

It's totally upto you.
